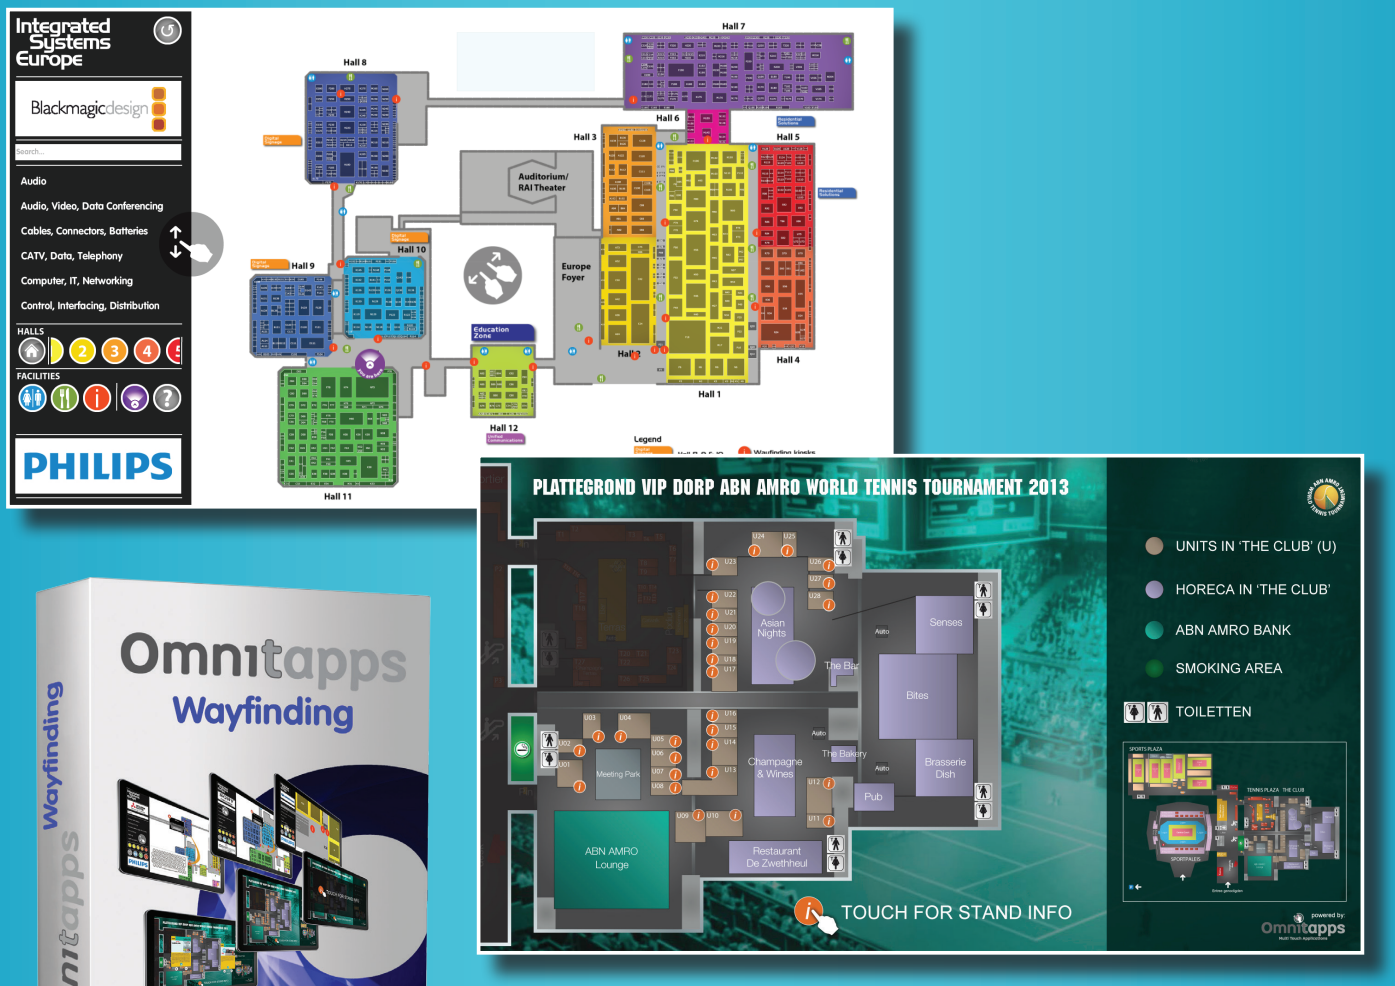
Wayfinding Software



Variable Solutions

Omnitapps launched a brand new multitouch wayfinding software application for the ISE organisation, to help visitors find their way around the world's best-attended trade-show for the professional AV and electronic systems industry for 2013, 2014 and 2015.

The user interface is made as simple as possible and all the data, including the dimensions and positions of the booths are coming from the Expocad database.

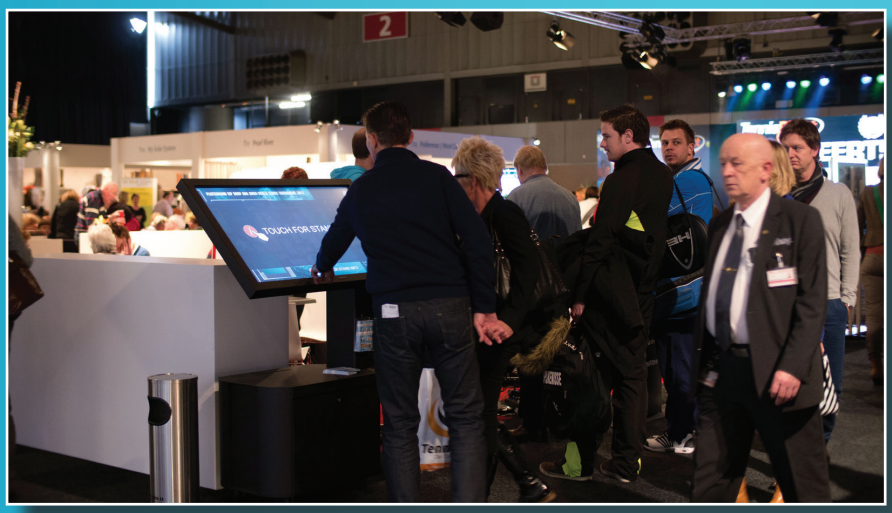
Based on the first 2013 version, other wayfinding solutions are made, like OmniWayfinding, Omnitapps Wayfinding (coming soon), Semi standard-, ExpoCad- and Custom-built wayfinding solutions.

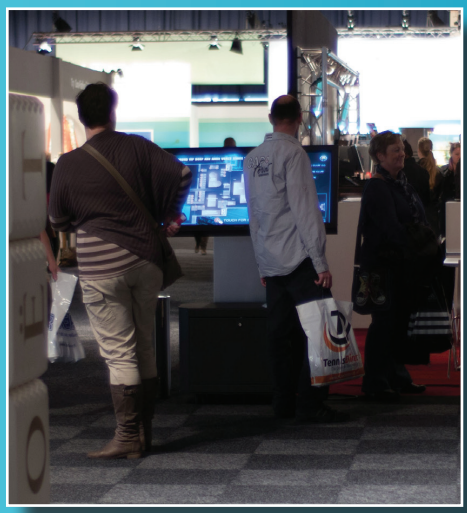
Omnitapps

Multi Touch Applications

OmniWayfinding

A basic multi touch wayfinding application with interactive "hotspots" on a floorplan image.





Omnitapps Wayfinding (coming soon)

A standard multi touch wayfinding application with self-configurable floorplan backgrounds, stand locations and booth information. Very suitable for resellers.

Semi standard wayfinding solution

An in-house build multi touch wayfinding application based on customer supplied floorplan, corporate design and database. These applications come with buildin analytics. Ideal for rental solutions at exibitions, trade shows, fairs, conferences, etc.

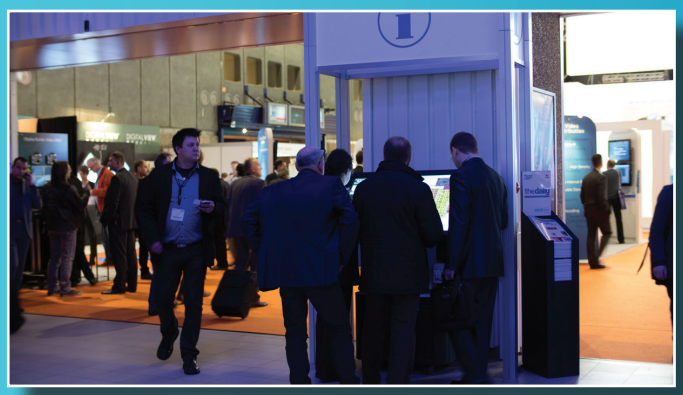
Omnitapps

Multi Touch Applications

ExpoCad wayfinding solution

An in-house build multi touch wayfinding application based on customer supplied ExpoCad data.

Integrated Systems Europe



Custom-build wayfinding solution

Of course not everything can be put into standard packages and therefore we can built a totally custom multi touch wayfinding solution especially tuned to your needs and desires.
